EXPERIMENT - 11

Deployment from Development to Production

Library Book Issue Management

Student Name	CALEB D
Register / Roll No.	241401016
Subject	Low-Code Application Development using Zoho Creator
Application	Library Book Issue Management
Platform	Zoho Creator
Record Date	16 October 2026

Aim

To understand and verify the controlled deployment of Library Book Issue Management from Development through Stage to Production, including validation, release history and recovery preparation.

Experiment overview

A documented Development-to-Stage-to-Production release of the library application, supported by version history and deployment evidence.

Department of Computer Science and Business Systems

Rajalakshmi Engineering College

1. Environment Model

Environment	Purpose in this project
Development	Manual design, validation changes, UI improvements and sample-record tests.
Stage	Verification of the packaged release before live use.
Production	Released application accessed by library users.

2. Recorded Release

Property	Verified value
Version	1.1
Release title	Library project final update
Version type	Minor
History creation time	09-Oct-2026, 15:08:52
Release contents	Dashboard update, structured confirmation email, validation fixes and request-status initialization
Current Stage / Production	1.1 / 1.1, rechecked 16 October 2026

3. Deployment Procedure

1. Prepared and checked the changes in Development.
2. Opened Environments and selected the application changes for a version package.
3. Published the package to Stage and tested the staged form and validation behavior.
4. Published the verified Stage package to Production under the earlier user authorization.
5. Opened the Production URL and checked the dashboard, request report and mandatory-field behavior.

241401016

4. Release Verification

Verification	Recorded observation
Stage valid submission	STAGE-QA-001 saved with Pending status.
Stage invalid quantity	A request for six copies was rejected.
Stage invalid rescheduling	A past collection date was rejected when rescheduled.
Production dashboard	8 total, 5 Pending and 2 Available at release verification.
Production main report	8 records visible to the owner.
Production blank form	Mandatory-field validation rejected empty submission.
Current version check	Stage and Production still show 1.1 on 16 October.

Stage validation observations are the preserved 09 October release record. The 16 October check confirms the version and history; it is not a repeat of every destructive or write-producing test.

5. Current Development Changes

The Experiment 10 query test, separate subform exercise and Experiment 14 reusable summary function were added in Development on 16 October. These later additions are not part of Production v1.1. The environment screen correctly shows changes available.

6. Recovery Preparation

An official full Production backup and separate Development/Production schema and CSV exports were downloaded on 16 October. Preserve these before a release. Restore/import should be tested in an isolated destination with authorization; a downloaded archive alone does not prove restoration.

Connection authorization and user access must be reviewed in any destination account. Avoid assuming that credentials and shared-user access automatically migrate.

Implementation Evidence

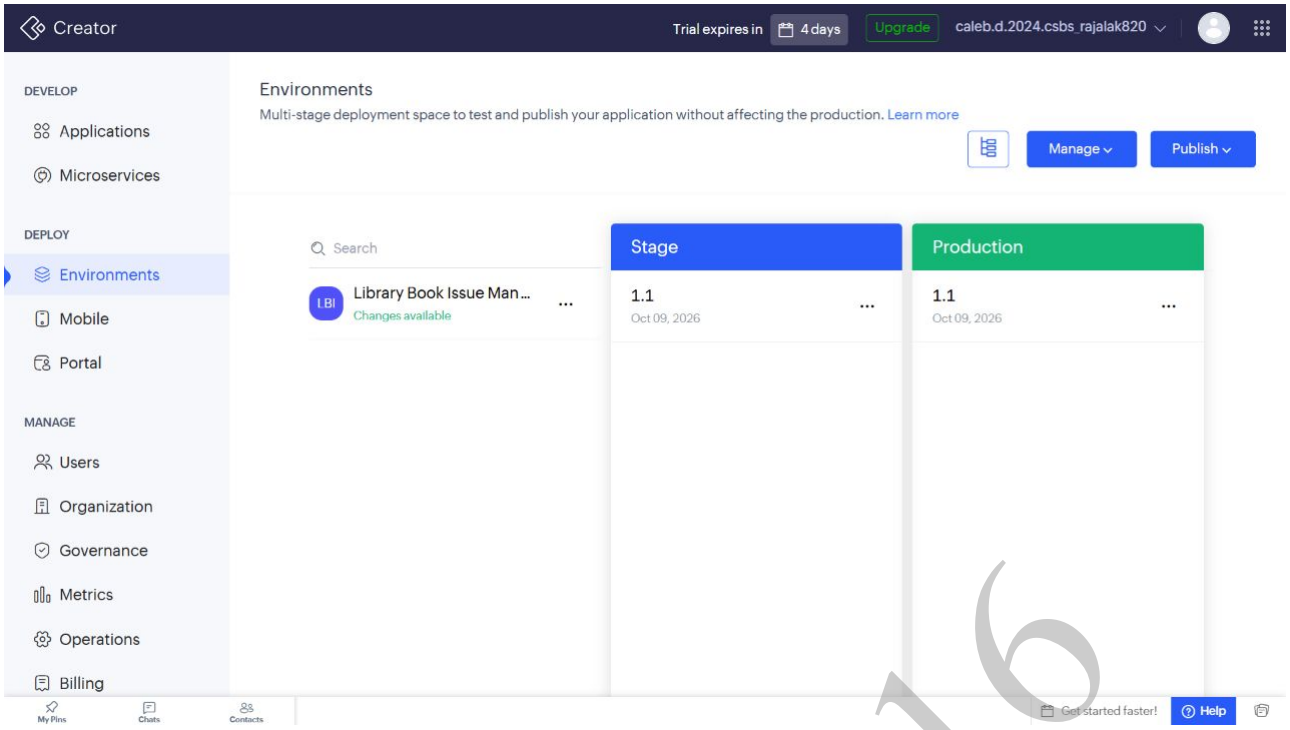

Figure 11.1. Current environment state captured 16 October: Stage and Production are 1.1; Development has later changes.

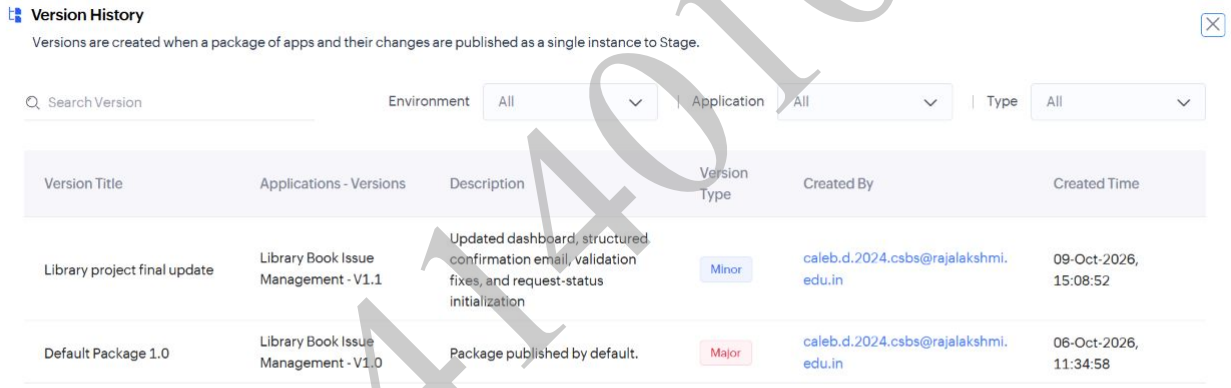

Figure 11.2. Version History identifies the 09 October minor release and its contents.

241401016

Implementation Evidence

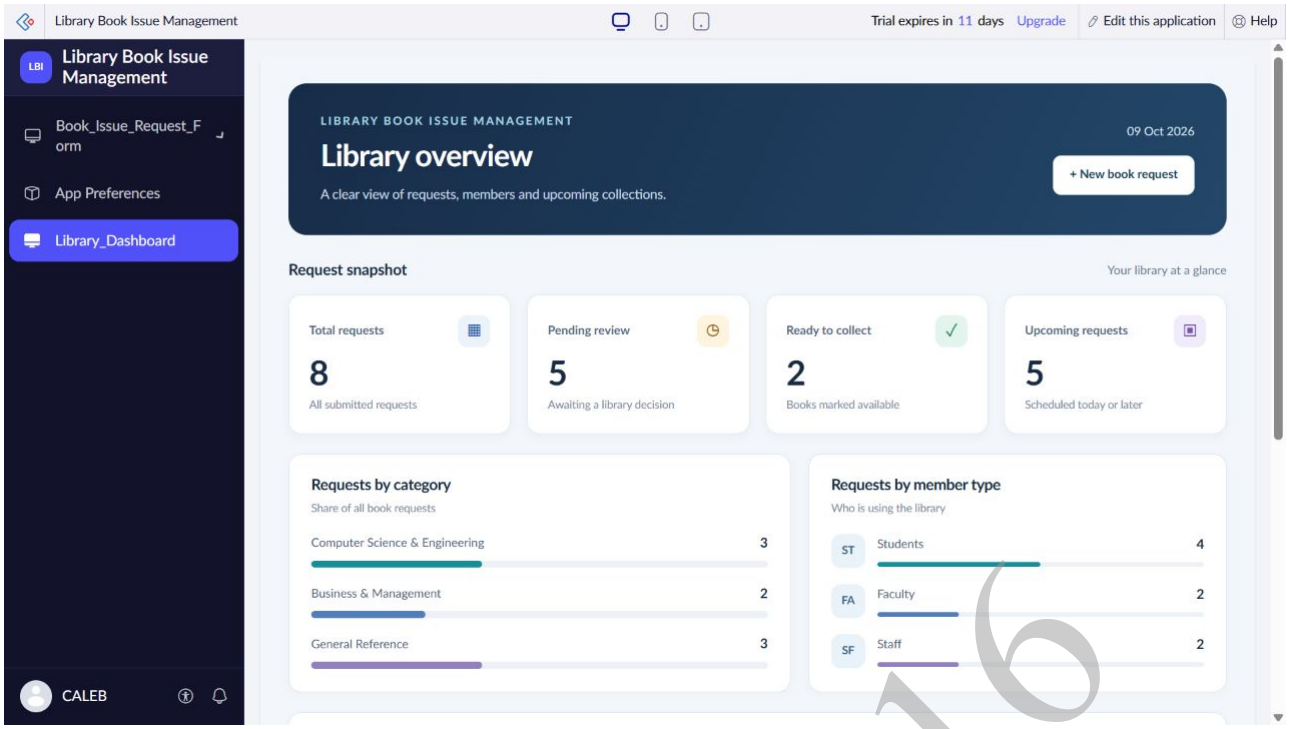

Figure 11.3. Preserved Production dashboard evidence from the 09 October version 1.1 release. Upcoming counts are date-dependent.

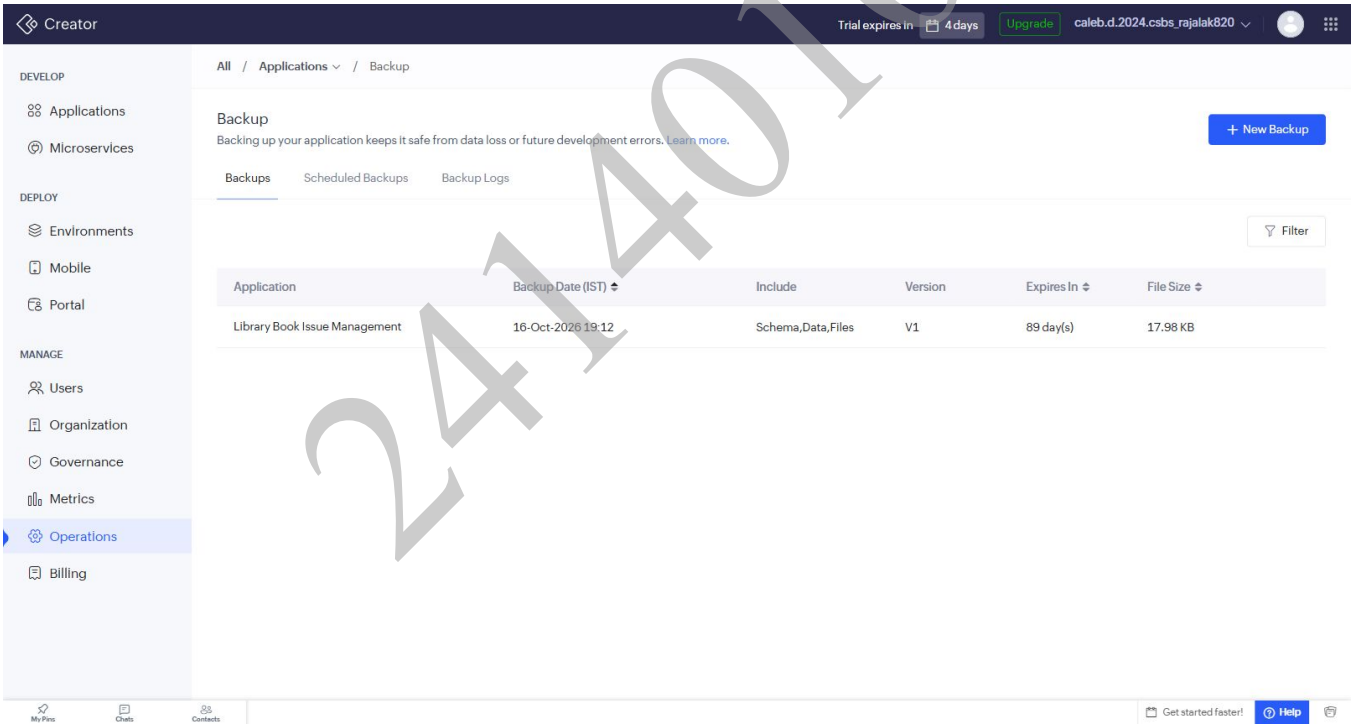

Figure 11.4. Official backup completion evidence from 16 October 2026.

7. Result

The existing library application was successfully released through Stage to Production as version 1.1. Current environment history confirms the deployed version. Later lab additions remain separate in Development.

8. Release Checklist

Before the next release	Required check
Package review	Select only intended components and review dependencies.
Stage testing	Check valid/invalid inputs, permissions, reports and function output.
Notification control	Use authorized test recipients; avoid duplicate emails.
Production approval	Obtain approval for the exact new package before publishing.
Post-release check	Confirm version, open the Production URL and verify key screens.
Recovery	Keep the last known good schema, data and release notes.
