EXPERIMENT - 15

Career Pathways and the Future of Low-Code

Library Book Issue Management

Student Name	CALEB D
Register / Roll No.	241401016
Subject	Low-Code Application Development using Zoho Creator
Application	Library Book Issue Management
Platform	Zoho Creator
Record Date	16 October 2026

Aim

To study career pathways and future directions in low-code development and present how the library application demonstrates relevant technical and business skills.

Experiment overview

A report and companion presentation connecting the library project to low-code career roles, a learning plan and evidence-based future directions.

Department of Computer Science and Business Systems

Rajalakshmi Engineering College

1. Low-Code as a Career Skill

A low-code developer turns a business process into a maintained application. Visual builders reduce routine interface work, while data modelling, testing, access control and integration still require technical judgment. The library project gives concrete examples that can be discussed in a portfolio or viva.

2. Career Pathways

Role	Typical work	Library project evidence
Business / process analyst	Clarify users, fields, rules and acceptance criteria.	Four form sections, mandatory fields and borrowing workflow.
Low-code developer	Build forms, reports, pages and business logic.	Creator form, queues, dashboard and Deluge functions.
Integration developer	Design API contracts, authorization and failure handling.	Zoho Mail connection and availability confirmation.
QA / automation tester	Design positive/negative tests and preserve results.	Range/date validation and queue-summary tests.
Application administrator	Manage access, releases, backups and audit review.	Permission profiles, v1.1 history and backup archive.
Solution architect	Choose system boundaries and manage technical trade-offs.	Enterprise library case study in Experiment 13.

These are role categories and skill mappings, not a guarantee of a particular job title, salary or vacancy.

3. Skills Demonstrated and Next Learning Steps

Area	Evidence already available	Next learning step
Data modelling	Typed member, contact, category and scheduling fields.	Model catalogue, physical copies and request lines.
Deluge	Validation and typed aggregate function.	Add robust error handling and repeatable test fixtures.
APIs and OAuth	Mail connection and structured email.	Study idempotency, delivery outcomes and token renewal.
Security	Profiles, field restrictions and audit trail.	Complete separate-account access tests.
Deployment	Development, Stage and Production v1.1.	Practice controlled restore in an isolated environment.
Analytics / AI	Dashboard, Zia exploration and analytics setup review.	Use appropriate data volume and verify generated output.

4. Suggested Six-Week Learning Plan

Week	Practical outcome
1	Write requirements and a field/data dictionary for a small workflow.
2	Build forms and reports with clean validation.
3	Create typed Deluge functions and record negative tests.
4	Integrate one service with OAuth and document failures.
5	Verify roles, audit records, backups and a staged release.
6	Present a portfolio demo and study official certification objectives.

Zoho provides official Creator developer resources and a certification route. Check the current course and exam requirements before enrolling. No certification has been claimed or obtained as part of this lab.

5. Future Directions

Direction	Evidence or basis	Implication for learners
AI-assisted development	Creator exposes Zia development assistance.	Review generated logic, protect sensitive inputs and retain tests.
Hybrid low-code / custom code	Creator supports custom functions; Catalyst offers serverless services.	Learn API design and programming fundamentals alongside builders.
Stronger governance	Roles, permissions, audit trail and environments are available controls.	Treat access review and release discipline as development skills.
Reusable integrations	The library project uses a named Mail connection.	Understand authorization, failures and monitoring instead of treating connectors as magic.

The expectation that these capabilities will remain useful is an analytical outlook. This report does not assign market growth percentages or predict salaries.

6. Companion Presentation

The editable presentation covers the experiment Aim, the library application as a portfolio, role pathways, skill evidence, future directions, a learning plan and conclusions. Its app screenshot is genuine and its research sources are listed in slide notes.

7. Result

A career-study report and presentation were prepared using the library project. The work connects demonstrated features to practical roles and identifies specific next skills, while separating current capabilities from future expectations.
