EXPERIMENT - 5

Reports, Dashboard and UI Builder in Zoho Creator

Library Book Issue Management

Application Name	Library Book Issue Management
Form Name	Book_Issue_Request_Form
Report Name	Book_Issue_Request_Report
Student Name	CALEB D
Student Roll No.	241401016
Experiment	5
Platform	Zoho Creator
Record Date	09 October 2026

Lab Record	Creation of processing reports and a custom library dashboard showing request totals, categories, member types, recent activity and collection workload.

Department of Computer Science and Business Systems

Rajalakshmi Engineering College

1. Objective

To create useful reports and a clear dashboard for reviewing library book requests, identifying pending work and monitoring availability and upcoming collection requests.

2. Problem Statement

A list of submissions alone does not tell library staff which requests need attention. Staff need status-filtered queues, category/date filtering and a concise overview of request volumes and upcoming collections.

3. Components Created

Component	Purpose
Book_Issue_Request_Report	Main report of requests permitted by the signed-in user profile.
Pending_Requests	Processing queue restricted to Request_Status = Pending.
Available_Requests	Collection queue restricted to Request_Status = Available.
Library_Dashboard	Custom page with summary cards, distributions, recent requests and navigation links.

4. Report Design

The main report includes the member name, status, register/roll number, member type, contact details, category, collection schedule, copies and confirmation flag. Library staff can review and update requests through permitted report actions.

Book_Category and Preferred_Issue_Date filters support targeted review. Status changes are reflected in the Pending and Available reports after saving. Member access remains restricted to permitted own records.

5. Dashboard Metrics and UI Design

Dashboard item	Definition / behavior
Total requests	Count of submitted request records.
Pending review	Count where Request_Status is Pending.
Ready to collect	Count where Request_Status is Available.
Upcoming requests	Date is today or later, excluding Collected and Unavailable. This is a request count, not a count of individual books.
Requests by category	Counts for Computer Science & Engineering, Business & Management, and General Reference, shown as labelled bars.
Requests by member type	Counts of Student, Faculty and Staff requests.
Recent requests	Five most recent submissions with ID, category, issue date and status badge.
Navigation	New book request, View all requests and Review pending requests links.

6. UI Builder / Custom Page Approach

Library_Dashboard is implemented as a custom Creator page using Deluge data retrieval and styled HTML. It uses a navy heading, consistent white cards, clear metric labels, category bars and status badges. The presentation was refined for desktop and narrower layouts.

Navigation links connect the overview to the form and reports. The page is permitted for Library Admin and Library Staff; it is excluded from the Library Member profile.

241401016

7. Implementation Procedure

1. Generated the main report from Book_Issue_Request_Form and arranged the useful processing columns.

2. Created Pending_Requests and Available_Requests using the corresponding status criteria.

3. Enabled category and preferred-date filtering in the main report.

4. Created Library_Dashboard and connected its displayed values to the saved request records.

5. Added navigation links and refined the page styling and layout.

6. Checked filters, status changes, dashboard counts and the Production v1.1 release.

8. Testing and Observations

Test	Observed result
Category filter	Business & Management returned only Aarav in the three-record Development test.
Date filter	October 2026 returned the three October Development records.
Pending / Available queues	At that test point: Aarav Pending; Priya Available; Divya Under Review excluded from both.
Development dashboard	3 total, 1 pending, 1 available, 3 upcoming; one record per category and member type.
Production v1.1	8 total, 5 pending, 2 available and 5 upcoming at release verification.
Navigation and layout	Dashboard links and desktop/narrow layout checks passed during UI verification.

Counts differ between Development and Production because their datasets are separate. Upcoming values also depend on the current date. Screenshot captions preserve the original test context.

10. Expected Learning Outcomes

- Create reports for different processing stages.

- Apply filters and interpret report results.

- Design a dashboard using meaningful metrics and clear navigation.

- Verify displayed summaries against saved records and environment context.

11. Result

The main report, Pending and Available queues, and Library_Dashboard were implemented and tested. The redesigned dashboard was released in Production v1.1.

Conclusion

The dashboard and filtered queues give staff a practical overview of the library workload and a direct route to reviewing and processing requests.
